MAGIC HOOPS?

FOR THE LAWN, THE GARDEN WALK, OR THE PARLOR.

BRADLEY'S KINDERGARTEN

Alphabet & Building Blocks.

THE ONLY SUCCESSFUL COMBINATION OF ALPHABETS WITH BUILDING BLOCKS.

THE above engraving represents a few of the thousands of beautiful forms that can be produced with these Blocks. The KINDERGARTEN FORMS herein adopted have been proved by twenty years' experience in the Kindergarten schools of Germany, to be superior to any other set of equally simple shapes, and capable of almost an infinite variety of combinations, thereby educating the youthful mind in designing and mechanical construction long after the mere alphabets, which we have for the first time combined with these forms, cease to be of use or interest. The SCRIPT LETTER is a novelty never before attempted on Blocks, and enables the child to learn the written as well as the printed alphabet.

The universal opinion of parents is expressed in the words of one father who said to us, "They are the best set of Blocks that our children ever had, and the variety of combination is so great that I have really found myself a boy again for whole evenings in building block houses."

PREFACE.

THE nature of the game of Croquet is such that it has been exceedingly difficult to establish any one code of rules that could be adopted as standard authority. The one great obstacle to the adoption of National Rules is found in the fact, that Croquet is so much a social, home game that Croquet clubs and regular organizations do not flourish to any considerable extent, throughout the country, and hence it is difficult to call a national convention that would represent the most intelligent and executive class of Croquet-players. But in order to have peace and harmony on any Croquet ground, some *authority* must be adopted as governing the play on that ground. What that authority shall be, of course, depends upon the decision of the majority of the players occupying or owning the ground, and will be in

accordance with their preference for, or opposition to, some of the prominent points advocated by the several leading authorities.

In our former editions we have assumed no authority in the matter, but have endeavored to place the different practices in a just light, merely expressing our preferences regarding certain practices in contested points, waiting patiently for the coming of a National Croquet Congress. As this much desired object seems to be as far distant as ever, we have thought proper to put this edition more in the form of authority for the better guidance and convenience of such players as choose to adopt this manual as their guide. We have not intended to ignore the opinions of other competent writers on the subject, in this edition, more than formerly, but have put our arguments and explanations considerably in the form of an appendix, rather than to give them place among the rules of the game.

We have, in former editions, advocated several practices that at the time were met by some opposition, and hardly considered orthodox; but we believe we have in no case found it either necessary or desirable to retract any opinion

given in support of any practices regarding which we took original ground, or in reference to which there existed a great difference of opinion among the commonly received authorities: On the other hand, we have refrained from advancing some ideas that might seem too radical.

On *Loose Croquet*, the *flinch* and *double points*, we have found no occasion to change the rules as established in our last edition, believing them to be sustained by the great majority of expert Croquet players in this country.

In this edition we take another step, and very materially simplify the game by abolishing the whole idea of a Booby. The argument for this may be found in the Appendix.

Many persons object to the multiplication of the rules of the game, claiming that they render it too complicated. We believe that a multiplication of rules to an extent necessary to settle every possible dispute on vital questions, tends to simplify rather than complicate a game; and while we have endeavored to adopt such practices as combine to constitute a systematic game with the least possible number of arbitrary requirements, we have also desired to give a suffi-

cient number of rules on each subject to leave no chance for doubt.

There will necessarily arise some differences of opinion on some points ; but we believe that in every case, if the general principles are followed out, a just decision will be arrived at.

The *Croquet problems*, as we have presented them, are of great advantage to learners, especially such as have not the advantage of personal instruction from an expert player.

Any suggestions from experienced players will be thankfully received and carefully considered by the author, if addressed to the publishers of this book.

CROQUET.

CROQUET has been for several years one of the most popular pastimes in England, and is now very justly receiving a large and rapidly increasing share of attention in this country. It is unmistakably a game of *science*, in which the brain, as well as the muscles and nerves, has an essential part to perform,—thus very closely resembling billiards, to which game it is in some respects superior, in that it is a more social game, and gives an opportunity for healthful open air exercise.

Unlike most of out-of-door sports, it does not require the possession of great strength or powers of endurance, or severe muscular exertion on the part of the player. Excellence in it is almost equally attainable to the weekly and delicate as to the healthy and robust. Old and young meet on its arena on more nearly equal terms than in any other known game of skill. A “correct eye,” steady hands and nerves, and good judgment, are the essential qualifications for a good player, and the possession of these advantages, of course, is

not dependent upon the age, sex, or condition of the person.

And it may perhaps be considered as the chief excellence of this game that it gives this opportunity, which very few other games, combining scientific play and physical exercise, afford for persons of the opposite sexes and disparity of age to join in one common amusement. It should be a matter of congratulation to all to see the rapidly increasing popularity of any healthful open air sport in this country.

We are a too laborious people, giving too much of our time to wearying cares, and too little to that relaxation and recreation without which there can be no real physical, mental, or indeed, moral health. Let us, then, remedy this ; let us hail and give countenance to any and all harmless, health-giving games, taking care only that the other extreme is not approached, remembering that—

“ All work and no joy
Makes Jack a dull boy.”

We predict for Croquet a success wider in this than it has reached in any other country. When we work or fight, we work and fight harder than any other people, and we should be as enthusiastic in our play.

In preparing this Manual of Croquet we have

endeavored to explain the general principles of the game, and to present a code of rules simple, concise, and shorn as far as possible of technicalities of expression, but comprehensive enough to include all points necessary to a thorough understanding of the game.

No two authors that we have read agree upon *all*, and nearly every one differs very widely from every other upon some points of the subject. There is no really original treatise upon the game extant,—its origin and originator are alike unknown. No one can refer to an undoubted, established authority, and hence there can be no binding, authoritative laws to which all players shall be amenable, and, therefore, it only remains for each club or party to accept some established code of rules which shall be acknowledged as undoubted authority to themselves. In the vocabulary are given all the terms necessary to be used for convenience in playing, with their definitions. Many other terms and names are used by other writers and players to designate the various operations, movements and condition of the game, but we do not consider them sufficiently useful or well established to merit a place in this Manual, and would much sooner reduce than enlarge the already extended vocabulary of the game.

MATERIALS OF THE GAME.

A COMPLETE set of Croquet consists of two posts, ten iron bridges, and four, six, or eight each, balls and mallets.

The sets as heretofore mostly offered in the market have had eight balls and eight mallets; but, as an eight-handed game is much less interesting than with fewer players, it is oftentimes very convenient to have the implements limited to six, and thus any feeling of neglect, by any person, at being left out, is avoided.

Any expert Croquet player would prefer to be a spectator rather than participate in a game of more than six players, while, for really scientific playing, nothing is equal to a well-matched four-handed game.

The balls should be about ten inches in circumference, perfectly spherical, and should weigh about eight ounces. They should be designated by different colors, either by painting the entire surface of the ball, or by a stripe of the color merely. But the first method is much to be preferred, as a ball needs all the protection it can have to preserve it from the effects of the weather, and for this purpose nothing is better than good

oil paint and varnish. There is a universal predisposition towards large balls by all novices in the game; but experience will invariably give the preference to a ball not more than ten and one-half inches in circumference, if of rock maple or birch, and if of boxwood, not more than ten inches. (See Appendix, A.)

The mallet-head should be about $2\frac{3}{8}$ inches in diameter and $4\frac{1}{4}$ inches long, shaped somewhat like the accompanying cuts; and the handle 33

inches long, $\frac{1}{8}$ of an inch in diameter in the largest part, and $\frac{5}{8}$ of an inch in the smallest. It is customary to paint some portion of the mallets to correspond to the colors on the balls. This is an advantage in distinguishing the different players; but some prefer an assorted set of mallets of various sizes, weights and lengths, without paint, allowing the players to select such as they like best—and perhaps there is no objection to this. A feeble or delicate person may not be able to play as well

with a mallet of the standard size as his opponent, and thus will be upon an unequal footing with

him at the outset; while, if each selects such as is suitable to his or her condition, all will be satisfactorily equipped, and, of course, upon equal terms as far as the implements are concerned. For balls and mallet-heads good rock maple is the most desirable of all our native woods, and hickory is the best for mallet-handles. Boxwood is very good for mallet-heads, but is perhaps too heavy for balls. Boxwood mallet-heads and good rock maple balls, well painted, make an elegant and superior set, and preferable to a complete boxwood set; while rosewood and lignum-vitæ balls are little better than iron, and entirely unfit to use.

The bridges should be made of iron wire about $\frac{5}{16}$ of an inch in diameter, in form like an ox-bow.

BRIDGE.

The width of the bridge should be equal to the circumference of the ball, and the height such that when firmly set it will stand out of the ground a distance equal to its width. They should be uniformed in color. White is best, as it is more easily seen, and contrasts more pleasingly with the green

of the turf. Some have adopted the practice of painting them of different colors, but the reason assigned seems not to be a good one, and experience almost unanimously pronounces in favor of a uniform light color. (See Appendix, B.)

The posts should be about 28 inches long, $1\frac{1}{2}$ inches in diameter in the largest part, and pointed so as to be driven into the ground.

POST.

They should have rings painted on them corresponding to the colors of the balls, and of such width that the bottom ring will be as high from the ground as the top of the bridges. Thus supposing the post to be 28 inches long, commencing at the top, make each ring $1\frac{1}{4}$ inches wide. This will occupy 10 inches, and hence allow the posts to be driven into the ground 8 inches, and still have the lowest color so high from the turf that it can be easily seen from any portion of the ground. The order of the colors on the post is not essential so long as the light and dark colors alternate; but the two uppermost colors belong to the chiefs of the two sides, and therefore most properly should be black and white, as those are the best representatives of dark and light colors.

The exact arrangement of the succeeding colors is immaterial, but the following is very good, commencing at the top :—

1st. Black.

2d. White.

3d. Blue.

4th. Yellow.

5th. Brown.

6th. Red.

7th. Green.

8th. Pink.

As the order of the colors on the posts governs that of the play, and since those on each side play alternately, it follows that in a game of eight the dark balls—black, blue, brown and green—are matched against the light ones—white, yellow, red and pink. (See Appendix, C.)

THE GROUND.

IN contemplating the preparation of a Croquet ground, the first question that occurs, is, how much and what kind of ground is necessary? The size of the ground, as well as the distance between the bridges, is governed very much by the taste and accommodation of the owner.

ELLIPTICAL CROQUET GROUND. SEE PAGE 13.

A model Croquet ground has been defined as an elliptical field, one hundred feet long and sixty feet wide, with the bridges from nine to twelve feet apart ; but persons possessed of only a limited plot of ground need not conclude that the above dimensions are absolutely necessary ; for an equally interesting game may be played on ground not more than sixty feet long and thirty feet wide, with the bridges from six to eight feet apart. The bounds may be imaginary lines defined by corner bounds, or they may be walks or other natural bounds suggested by the nature of the ground ; or, if a plot is prepared expressly for the purpose, a ditch about eight inches wide and six inches deep well turfed, is probably the best bound that can be made.

The following explanation of the diagram on the preceding page will illustrate a simple method of laying out an Elliptical Croquet Ground :—

Having decided upon the extreme length and breadth available for the ground, drive a stake at A and another at B. Now draw the line A B, and by measurement find the center G, and draw the line C D as nearly square with A B as possible by “guess.” Then with a line attached to B measure the distance B C, and also B D, and if the two are equal, the line C D is square with

A B. If not equal, make them so by lengthening one and shortening the other. Having, then, the line A B, and the stakes C D, take a line and measure the length B G, (i. e., one-half A B,) and with one end at C, bring the other end to the line A B at F, and drive a stake; also, do the same at E. Now take a line and attach one end to F, carry it round C and fasten the other end to E. Then, having pulled the line off the stake C, with a pointed stick or wire, follow round inside the line E C F, keeping the line constantly tight, and the trace made by the wire will form a perfect ellipse.

If now the turf be removed about eight inches wide around this line, and a slight ditch made and the turf replaced, the ditch thus made will form the most convenient boundary that can be devised for a Croquet ground.

A smooth, closely cut turf is always to be chosen, and is improved by a thorough rolling with a very heavy roller; or, if that is not available, a few hours' work with a heavy mallet will bring the ground into very good condition. Next to having the turf smooth, the most important point is to have the ground level; and yet a very good game can be played on an uneven or sloping ground, if, in making the strokes and deter-

mining the necessary force and direction, a proper calculation is made with reference to the condition of the surface over which the ball is to pass. It, in fact, shows more skill to play a good game upon a poor ground than upon a perfect one.

GENERAL PRINCIPLES OF THE GAME.

Two players being designated captains or chiefs, one for each side, sides are chosen in the usual

manner. The privilege of first choice of players is very conveniently decided between the chiefs by each placing his ball under the first bridge and striking for the starting-post; the one who thus drives his ball nearest the post gaining the first choice.

The chief who has the first choice takes the ball corresponding in color with the top of the post, and the other chief the next ball according to the order of the colors on the posts, while the remaining balls are given to the other players in the order in which they are chosen. (See Appendix, D.)

Eight persons may play, but a game of four or six is the most interesting. If four or more play, each player uses but one ball; but if only two play, the game is improved by each player taking two balls and playing them alternately as usual. If there be an odd number of players—either three, five or seven—the players play against each other individually, or one person takes two balls and plays each in its proper turn.

Assuming that each player has a ball and a mallet, that the bridges are arranged in either of the three positions given in diagrams Nos. 1, 2 and 3, we now come to the mode of playing the game. The object is to drive the balls through

all the bridges, in the direction indicated by the dotted lines on the diagrams, and to strike the two posts. The side all of whose members succeed in performing this feat first, wins the game. Now although this is the chief object of the game, yet the act from which it derives its title—to wit, “Croquet”—is of much greater importance than would at first be imagined. If a player hit with his ball any of the others, he is allowed to place his own against the ball he has struck, and setting his foot upon his own ball, he hits it with the mallet, and the force of the blow drives off the other ball while the playing ball remains stationary. As a player is allowed to croquet either friend or foe, it is evident that he can do a great deal of damage or service, according to his inclination, since he is at liberty to drive the ball in any direction he pleases.

The Roquet-Croquet is an operation still more interesting than the Croquet as it is susceptible of much greater skill in its execution. This is accomplished the same as the Croquet, except that instead of holding one ball firmly by placing the foot upon it, both balls are left free to be driven together by the blow of the mallet. By practice and a skillful placing of the balls a stroke may be made that will cause the balls

to diverge in any forward directions the player may desire.

In commencing a game, the first chief places his ball one-third the distance from the starting-post to the first bridge, and endeavors by striking it with the end of his mallet's head, to drive it through the first bridge. If he succeeds, he continues his turn and attempts to send the ball through the second bridge, and then through the third, for driving a ball through a bridge, or hitting another ball, generally imparts the privilege of an additional stroke.

When one ball driven by a blow of the mallet hits another, it is said to make *roquet* on that ball.

When the first player who should be black, has missed, white goes on, and the other players follow in the order of the colors on the posts, and very soon comes the opportunity to use the great advantages of the Croquet and Roquet-Croquet. Often when a player has his ball in a good position in front of a bridge, another will hit it, and then by Croquet or Roquet-Croquet drive it to the other end of the ground, compelling it perhaps to take two or three turns before it can regain its former position. Occasionally two or three balls lie close together, and one is struck by a ball which was some distance off. The player

is now allowed to place his ball by the side of the one it has struck, thus gaining position near the others, so that after croqueting it he is almost sure of hitting the others.

As an example of the use of the *Roquet-Croquet*, we will take diagram No. 1, and suppose that white plays with success through the first two bridges, and that black lies somewhere beyond the second bridge. Now if there was no other ball near, it would be impossible for white to continue to play and pass through the third bridge, because it will require one stroke to get in position for that bridge; but if white can *roquet* black, then she can *roquet-croquet* with black up in front of the third bridge, and then, as the roquet gives another stroke, play through the third bridge and perhaps through the fourth and fifth. If below the fifth she should find, say the brown ball, to *roquet-croquet* with, it would be possible to get in front of No. 6, and then down to the turning-post and hitting that return up through No. 6. Here the brown ball may again be roqueted, and then roquet-croqueted into position for No. 8, and so on. This of course could only happen if *white* was an extra player and the other balls were in very favorable positions, but it serves as an illustration of the use of this very valuable stroke.

The player who reaches the turning-post first, has great advantages for a time, for as soon as he touches it, he commences his return journey, and meeting the other players on their way to the farthest point of their journey, he is able to croquet them and considerably impede their progress.

When a player has run all the bridges he becomes, what is called in the technical language of Croquet, a Rover. This name and distinction originated when the rules of the game were considerably different from those commonly accepted at the present time, and when certain extra privileges were granted to the rover, but now it signifies nothing except that such a player has run all the bridges and has not *struck out*.

Any player can at any time assume the *character* of a Rover for any convenient length of time, but such play is not generally judicious or advisable except in case of an expert player.

The name Rover is always confined to such players as have run all their bridges. It is obvious that an expert Rover can prove of immense advantage to his side, and should generally avoid hitting the starting-post till all on his side have run the last bridge.

The excitement towards the end of the game, often becomes intense, and each stroke is watched

with the keenest interest. Gradually, one by one, the players hit the post, until perhaps only two remain, and now occurs an opportunity for skillful play. The object of both is first to hit the post, and failing in that, to keep as far off his adversary as he can. Each endeavors, at the same time drawing nearer to the great object in view, to keep the post between his and the other ball. At length one plays at the post, misses it, and sends his ball near his adversary, who first hits it, next croquets it away, and then strikes the post, and wins the victory.

ARRANGEMENT OF THE BRIDGES.

Diagram No. 1.

THIS arrangement of the bridges, which is the simplest of the three we have drawn, is the one which we recommend for all eight-handed games, or for beginners.

The figures marked on this diagram are intended merely to furnish a relative scale of distances.

DIAGRAM,

No. 1.

Thus with these distances the posts are 53 feet apart, which is, perhaps, more than is desirable, unless the ground is very perfect, or the players experts.

The course of the ball is indicated by the dotted lines, and the arrows show the direction in which the balls proceed on the round. It will be observed that bridge No. 3 is to the left of No. 2. As represented in this diagram, bridges 3 and 10 are set a little in advance of 2, and 6 a little in advance of 5 and 8. Some players prefer that 10, 2 and 3 should be in a straight line, and the same with 8, 6 and 5. We prefer to have 3 and 10 enough in advance of 2 to make it just possible for an expert by a *very* superior stroke to run No. 2 and get position for No. 3 at one blow, and the same with 5, 6 and 8. In short, we would have the arrangement such that it is not absolutely *impossible* for a player to make the grand round in one tour without the aid of the roquet. This, of course, would very rarely be accomplished—never, except by extraordinarily skillful play—yet it should be made possible, but very difficult.

Diagram No. 2.

IN this the same number of bridges are used, as in the first diagram; but the bridges numbered

DIAGRAM,

HEAD.
TURNING POST.

respectively 4 and 9, instead of being placed parallel to the others, are now at right angles to them; thus in playing from 3 to 4, the ball must keep to the left of 4, and then pass through it, from the outside of the game; a much more difficult arrangement than the first, and somewhat more difficult than the third, although at first sight it may not appear so.

Diagram No. 3.

IN this, the third diagram, it will be seen that the two center side bridges are done away with, and that one is placed in the center of the ground instead; but although in the play we now require one bridge less than in the former diagram, yet the player will have to pass through the same number of bridges as before, since he travels twice through the bridge in the center, once on his way to the turning-post, and once on his return. This is the best arrangement of bridges for a fourhanded game. As the player's knowledge of Croquet increases, many other positions will suggest themselves; but those we have presented are the simplest, and are the diagrams in general use at the present time. Some authors recommend the invariable use of diagram No. 1, as being sufficiently difficult, especially when bridges 10, 2, and 3 are on a line.

5. If on commencing a tour of play, the playing ball is in contact with another ball, the player has the same privileges of his stroke, and subsequent play, exactly as he would have had if the balls had been separated one-half inch or more.

6. The game is opened by the chief holding the ball corresponding in color with the top of the post, and the players on the two sides follow alternately according to the order of the colors on the posts. (See Appendix, D.)

7. If any ball is played out of its proper turn and discovered before the play of another ball has commenced, the misplayed ball may be returned to its original place, or permitted to remain in that to which it has rolled, at the option of the chief of the opposing side. But if the mistake is discovered before the player has finished his turn and the misplay be allowed, the misplayer shall be permitted to finish his turn. If the chief does not permit the misplay, the misplayed ball shall be returned to its original place, and any damages sustained or advantages gained by either side shall be canceled. If the misplay is not discovered before the play of another ball commences, or is allowed, the misplayer cannot use his next turn as he has anticipated it.

8. If a player use a wrong ball, all the balls moved by such play must be returned to their former position, and the misplayer lose his turn.

Section II.

RUNNING A BRIDGE.

1. The bridges must be passed through in their regular order in the direction of the course.

(This is called running a bridge.)

NOTE.—A ball runs a bridge when it passes through it in order and course, by a direct blow, by roquet, roquet-croquet, croquet or concussion. Hence, for a player to drive his ball through a bridge out of its regular order, or from the wrong side counts no more than to pass over any other part of the field.

2. A player continues to play as long as he makes a point in the game.

NOTE.—Making a point is running one or more bridges, striking the turning-post in order, or performing the roquet, except on a ball the second time in one tour without making an intervening step.

3. A ball is not through its bridge when the handle of the mallet laid across the two piers of the bridge upon the side from whence the ball came, touches the ball without moving the bridge.

4. A roquet that constitutes a point (note, p. 34) gives to the player the right to croquet every ball roqueted, and afterwards to continue play; but no other privilege, even though the roquet and one or more bridges are made at the same stroke.

5. If a player makes two steps at one stroke, he may take position one mallet's length or less, in any direction from where the ball rested.

6. If a player makes three steps at one stroke, he may take position as above up to two mallet lengths or less.

7. A ball passing under its bridge in the wrong direction is not in position to run the bridge until it has passed clear through according to the foregoing rule.

8. A ball lying under a bridge is not in position for that bridge if it has been so placed by the hand for the purpose of croquet or roquet-croquet, no matter from what position it may have been taken. (See Appendix, E.)

9. Tolling the *turning*-post is in all respects equivalent to running a bridge, but the post may be tolled from any quarter.

Section III.

STRIKING OUT.

1. A ball, after it has run all the bridges, may hit the starting-post either by a blow from its owner's mallet, by roquet, roquet-croquet, croquet

or concussion, and is then a *dead ball*, and must be *immediately* removed from the field.

2. A player who having run all the bridges strikes the starting-post, is out of the game, his turn is omitted, and the play goes on as before. If, instead of striking the post, he continues to play, he is called a *rover*.

3. If the roquet-croquet is allowed to all players alike, the rover is governed entirely by the same laws as other players.

NOTE.—Therefore, a rover having completed the grand round, and having no other steps to make (except *stepping out*, when of course his play ceases) can only acquire the right to continuance of play by the roquet. He may (after roquet upon it) croquet or roquet-croquet each ball once only during a tour. Roquet upon a ball the second time during a tour does not entitle him to a continuance of play.

4. When all the balls on one side have made the grand round and hit the starting-post, that side has won the game.

Section IV.

ROQUET.

1. A ball roquets another when it comes in contact with it by a direct blow of the mallet, or rebounds upon it after the blow, from any fixed obstacle of the ground or from another ball.

2. A ball having roqueted another ball, is at

liberty to croquet or roquet-croquet it or proceed on its round ; providing that the playing ball has not already **in that tour** roqueted that same ball since making a step on the round.

3. A ball may roquet another ball twice between two consecutive steps, but the second roquet does not entitle the player to a continuance of play.

4. Any player in his turn is at liberty at any time to make roquet on *any* ball on the ground.

5. A ball having made roquet and declined the croquet, may continue its play either from the position to which it has rolled after the roquet, or from the side of the roqueted ball.

6. If a ball roquet another and thereby gain the privilege of croquet, and afterwards, at the same blow, run a bridge ; it may croquet the roqueted ball, then proceed to roquet it again, then croquet again and proceed on its round ; or waiving either or both croquets, or the last roquet and croquet, may proceed on its round.

NOTE.—Thus supposing the playing ball roquets a ball that it has not roqueted since making a step, and *afterwards* at the same blow runs a bridge ; it of course has a right to croquet the roqueted ball ; then as that roquet was made *before* the playing ball run its bridge there is no reason why it cannot again roquet and croquet the same ball. But had the playing ball *first* run a bridge and afterwards at the same blow roqueted a

ball then it can have but one croquet according to Rule 2, Sec. IV.

7. The continuance of play is gained by virtue of the roquet, and not of the croquet. The croquet is merely a privilege consequent upon the roquet. Therefore, to waive a croquet does not terminate the play. This principle once fixed in the mind will avoid much confusion in understanding and interpreting the rules. (See Appendix, F.)

Section V.

THE CROQUET AND ROQUET-CROQUET.

1. A player may croquet or roquet-croquet any number of balls consecutively; but he can croquet or roquet-croquet only those balls on which he has made roquet, and roquet on the same ball the second time in one tour without an intervening step does not entitle the player to a croquet.

2. If a player in the act of croqueting does not *separate* the balls, he is at liberty to take the stroke over again. (See Appendix, G.)

3. If a player in executing the roquet-croquet does not move the croqueted ball from its position, his tour of play ceases, unless by the same stroke he makes a point.

NOTE.—If it is in dispute whether or not the ball has been moved as above required, the question shall be decided by the umpire if there be one, if not, by the chief of the side opposing the player. (See Appendix, H.)

4. If a ball is croqueted either through its own bridge or upon the turning or starting-post when in order, a point so made holds good.

5. In making ricochet the player is at liberty to croquet either a part or all of the balls roqueted; but the order of croquet must be that of the ricochet,—the player, however, has only one additional stroke, and not one for each ball he has roqueted.

6. If a ball when croqueted or driven through its own bridge in its course roll back through or under the bridge, it has not run that bridge. (See Appendix, I.)

7. The laws that govern Croquet all apply to Roquet-Croquet, except as to points for which special rules are herein given.

8. If a ball flinch in the execution of the Croquet, it is considered as merely a Roquet-Croquet, and subject to the same laws. In this case, of course, any point made or advantage gained by either ball holds good. (See Appendix, J.)

Section VI.

DISPLACED BALLS.

1. A ball accidentally displaced must be returned, by the chief of the side opposed to the person displacing it, to the place where it was lying, before the play proceeds.

2. If a ball be hit off the ground it is to be placed *at once*, and before the play proceeds, twelve inches within the limit of the boundary and at a point nearest to where it stopped, which of course causes the ball to be brought in *square* with the boundary.

3. If a ball in its progress over the ground be interrupted by the person or mallet of an enemy, the ball may be placed by the chief of the side owning the ball, in such position as he may judge it would have rested had it not been interrupted in its progress. If interrupted by the person or mallet of a friend the ball may be placed by the chief of the *opposing side* in such position as he may judge it would have rested.

4. *A person not taking part in the game, should never be within the bounds of a croquet ground when a game is in progress; but should such person accidentally be in such a position and either displace the ball, or interrupt it in its prog-*

ress, such person shall be considered as an enemy to the owner of the ball, and the ball be replaced according to rules 1 and 3 of this section.

SUGGESTIONS TO BEGINNERS.

KEEP YOUR TEMPER, *and remember when your turn comes.*

Make good use of the privilege of croquet and roquet-croquet, and not consider it the sole object of the game to run the bridges—and yet it is not well to too much neglect the bridges as they must all be run before you can become a rover. Practise the roquet-croquet whenever an opportunity offers, as it is susceptible of more scientific playing than any other stroke.

Accustom yourself to be guided strictly according to established rules as far as you are informed on the subject.

Do not attempt to use a kind of push and call it a stroke, although it may not be expressly forbidden in some manual of croquet.

Avoid acquiring the habit of standing behind the ball and holding the mallet in a perpendicular

position with both hands when making a stroke, even though you play with those who do not object to the practice, as it will not be allowed on any well-regulated croquet ground. In making a stroke grasp your mallet firmly ; strike squarely—take care that your wrist does not turn or twist (unless you wish to give a twist to your ball)—and after getting your aim look rather at your mark than your ball when giving the blow. After calculating distance, direction, &c., there is no more use in looking at your ball, except to be sure you can hit it, than in throwing a stone to look at your hand rather than the mark.

If the enemy have an expert rover it is generally advisable to use every effort to strike him out.

As an offset to this method of play it is often advisable to neglect to make the last bridge till near the close of the game, as in this way you can venture as near the starting-post as you please without the fear of being deaded.

It is often the case that you and an enemy may both be in position for the last bridge. In such a case as a general rule roquet him, then croquet or roquet-croquet through the bridge, roquet again and croquet him against the starting-post, thus depriving the other side of a rover, gaining the advantage of bringing two of your own side into

consecutive play. Leave your own ball as near your friend and as far from an enemy as possible.

Accustom yourself as much as possible to strike with one hand, as it is much more graceful, and many players allow no other blow.

The ladies will very much oblige all their associates in croquet by avoiding long dresses, which are continually dragging the balls about over the ground greatly to the annoyance of the players and disturbance of the game.

To the gentleman we would say it is no proof of skill in executing the croquet, to swing your mallet, with both hands and give a blow hard enough to kill an ox. If you want to do that sort of thing—it would be more agreeable to all concerned for you to go off alone somewhere and split wood. An easy skillful stroke will send a ball anywhere within the bounds, and a ball out of bounds may be brought in, so nothing is gained by “sledge-hammering,” except injuring the implements, irritating the players and delaying the game.

In executing the roquet-croquet the stroke may be varied so as to produce three very different results. First, if it is desirable to have the secondary ball go much further than your own, strike a *sharp quick* blow proportioned in force to the dis-

tance you wish your own ball to go, checking the force the instant the mallet hits the ball. Secondly, if you wish to send both balls along together strike a more sweeping blow (not a push) permitting the mallet to have its full swing. The difference in these two blows is much more easily discovered by the player than described with the pen.

The third stroke may partake of the nature of either of the above, but differs in the fact that the blow of the mallet is not delivered in a line with the centers of the two balls, but partially to one side of the rear ball, thus producing the splitting stroke, i. e., sending the two balls in courses diverging from each other. This is much the most difficult stroke of the three.

In procuring a set of Croquet Materials, be sure that you know what you want, or else buy a set manufactured by some recognized manufacturer. It may seem a very simple thing to have a set of mallets, &c., made from a description, but having tried the experiment, we can testify that to procure suitable lumber,—well seasoned, have mallets well shaped, the handles serviceable and not bungling, the balls *perfectly round*, the bridges well formed and proportioned,—and the painting brilliant and properly arranged is a very difficult matter. An English author on this subject

says : " it was our fortune (or rather misfortune)
" when in the country, last year, to take part in a
" game of Croquet played with home-made ma-
" terials. We only hope that it will never be our
" lot to play with such things again. The mallets
" were so large they had to be used as one would
" a scythe in mowing grass. The heads, instead
" of tapering at the center, bore a great resem-
" blance to an ale barrel on a small scale, and
" were so large that if one attempted to croquet,
" one was sure to hit one's own foot instead of
" the ball. These, by-the-by, were any shape but
" round. They bobbed up and down when in
" progress, and scarcely ever went in the di-
" rection which it was intended for them to
" go. * * * * *

" Such was the satisfactory result of the combined
" labors of the local carpenter and blacksmith.
" We therefore earnestly recommend our readers
" to eschew the use of home-made sets of Croquet
" altogether."

We endorse the foregoing statement, adding
that responsible manufacturers in various parts of
the country are now furnishing excellent sets of
implements at a cheaper rate than individuals can
get up equally good sets for themselves. There
is, therefore, no economy in using a home-made set.

PARLOR CROQUET.

Parlor Croquet is a very good substitute for the Lawn-game, and may be enjoyed in a winter day or evening very much as canned fruit or preserved flowers are enjoyed as excellent and beautiful substitutes for the delicious fruits of autumn and fragrant flowers of summer. But as the canned fruit is insipid when used beside the fresh fruit of autumn, so will the parlor game seem when attempted in the season of the field sport. There are two kinds of Parlor Croquet—which may be termed Carpet Croquet, and Table or Board Croquet.

The Carpet Croquet is played exactly like the field game and with similar materials except that they are usually smaller, being reduced in size in the same proportion that the space available in a room is smaller than the Lawn Croquet ground. The same relative proportion in the size of materials should be preserved as that given for the materials of the lawn game—assuming as a standard—a ball from $2\frac{1}{4}$ to $2\frac{1}{2}$ inches in diameter. There are several ingenious devices for fastening the bridges to the floor or carpet. Each one of

those which we have seen have some objections ; but those which are fastened with tacks are the simplest and we consider them the best.

The Board Game is played on a board of any convenient size—say five feet long and three feet wide—covered with baize or flannel, and surrounded by a ledge or thin strip projecting above the top surface three-fourths of an inch.

The bridges and posts are set in this board in the same manner that the larger bridges are set in the ground on the lawn. The balls should be about one inch in diameter and may be of glass—but boxwood or ivory are better.

The size of the mallet should be in proportion to that of the balls, with handles about eight inches long.

The method of play is the same as in Lawn Croquet, except the Croquet is executed by placing the finger instead of the foot on the playing ball. The rules are the same with the following exception and additions :

Making two or more steps at one stroke does not entitle the player to the privilege of taking position up to one or more mallets' length.

Any player driving his ball off the board terminates his tour of play by that stroke, and the ball must be placed immediately on the starting spot.

If a player, by a roquet or concussion, drive the ball of an *enemy* off the board, the owner of the ball shall immediately replace it on the board, in any position he may choose, and the player may then continue his play. If a ball is driven off as above, by a friend, the ball so driven off shall at once be replaced on the starting-spot, and the player may continue his play.

Should it so happen, that, according to the above rules, it should be necessary to place a ball on the starting-spot, when the spot was already occupied by another ball; then the second ball shall be placed about one inch from the first ball, and on a line with the starting-post.

A very pleasant variation of the game may be produced where there are but two players, by using one ball for each player, and then placing on the table an extra, *neutral* ball, which may be used by both players for the purpose of roquet-croquet, &c.

The board Croquet is the most popular, for the reason that it does not injure the furniture in any room, while the Carpet Croquet, although more like the lawn game, requires a large room—well cleared—or there will soon be an action of Croquet vs. furniture.

CROQUET PROBLEMS.

UNDER this head we present some problems that may be of use to learners, and convince them that success in Croquet does not depend on the amount of strength possessed by the player.

Of course, we can not in the limits of this work attempt to present any great proportion of the almost innumerable combinations that are constantly occurring in the practice of Croquet; but we give a few carefully selected examples, which we trust may serve as a key to the science of the game.

Before commencing the illustration of special points, we would fully impress upon the minds of Croquet players the fact that it is not the hard blows that tell on a Croquet field.

A clear brain, correct eye, and steady nerve are the chief requisites for a croquet player, and even without much nerve, a clear brain and a good knowledge of the rules and practices of the game will give the victory in a majority of the cases.

The remarks and examples here given are intended for learners, and probably will be read by many who will consider some of them exceedingly simple, and they may be so to those who have learned the game on a ground with expert play-

ers ; but it is not for them that this work is intended. Croquet is a game that can be played and enjoyed anywhere when once thoroughly understood, but may be made exceedingly tame through want of a knowledge of the fine points.

We have seen parties playing Croquet who had owned a fine set of implements for two years, and yet had not learned the first elements of good playing, and how should they? The implements had been purchased with the rules of the game, and these had been thoroughly studied and faithfully followed, but their best points in the game consisted in running the bridges and croqueting an enemy as far as possible at every opportunity. As soon as the scientific shots were even hinted at, their quick perceptions and knowledge of the game enabled them to profit by them at once.

These examples are based on the universal use of the loose Croquet or Roquet-Croquet, because we do not believe that American players of Croquet are willing to deprive the game of its best points and greatest fund of interest by giving the rover the monopoly of this truly scientific stroke.

The illustrations of the problems, as we have here attempted, is somewhat complicated, and any student will find it advantageous to first study this diagram and fix in his mind the order of

DIAGRAM.

the bridges and accustom himself, not only in reading this work, but on the ground while playing, to designate the bridges by the figures and letters here used, as this arrangement is becoming universal. It will be noticed that in running the first bridge on the way from the starting-post towards the turning-post, the bridge is No. 1, but on the return to the starting-post it is G.

The bridges number in order from the starting to the turning-post, and are lettered in order from the turning to the starting-post. Thus if a player is asked which is his proper bridge, and he says B, it is understood at once that he is for the second bridge from the turning-post going *from* the turning-post which he has already tolled.

These figures and letters will very soon, by constant use, become so associated in the mind with their respective bridges that it will require no effort of thought to connect them.

While the Roquet-Croquet or loose Croquet is the best stroke in the game, the splitting stroke is the best part of the Roquet-Croquet, and is both the most difficult and capable of the greatest variations. To accomplish this stroke successfully, the player must determine the direction he wishes each ball to proceed, and then, the balls being properly arranged, strike in a

Roquet-Croquet Stroke.

direction just about between the two, but bearing apparently more in the direction of the line connecting the centers of the two balls. A little practice will give a better idea of the effect of this stroke than pages of description — but a general idea may be obtained from the accompanying diagram.

PROBLEM 1. Ball No. 1 having run bridge 3 is in position for bridge 4. It roquets Ball 2, and at the same blow runs bridge 4. Now 1 having roqueted 2, has a right to roquet-croquet with it, which it does. Now the first roquet having been made previous to running bridge 4, ball 1 has a right to again roquet 2, and then croquet, or roquet-croquet and continue play. Thus for accomplishing the scientific stroke of roquetting a ball and running a bridge at the same blow, No. 1 gains an additional stroke which is as it should be.

PROBLEM 2. Balls 1 and 2 are in position for

bridge 3, 1 to play. 1 roquets 2, then roquet-croquets with 2 by a splitting stroke, running the bridge with 1 and carrying 2 outside the bridge. 1 again roquets 2 which gains the privilege of another roquet-croquet, but now the splitting stroke is not necessary as 2 is not in position for bridge 4, and therefore, both balls can be driven through the bridge together, and the operation of roquet and roquet-croquet repeated as long as the player can play with success. The same result can be accomplished by croqueting 2 on one side of bridge, and then running bridge with 1.

5 —●—●—

• S. P.

PROBLEM 3. 2 to play. 2 is in position for bridge F, and 1 is in position for bridge G. 1 is an expert, and hence it is good playing for 2 to dead him. 2 runs F, roquets 1, roquet-croquets through G, again roquets 1 and croquets him against the starting-post. 2 is now a rover and at liberty to proceed to help the other players on his side, and 1 having been deaded, 2 bids fair to win.

PROBLEM 4. No. 1 to play. He is not an expert player and not sure either of his direction

or force, but wishes to gain position for bridge 4, or—being a rover—wishes to aid 3 or retard 4. By roqueting 2, and then roquet-croqueting with 2 strongly in the general direction of 3 and 4, he may drive 1 and 2 entirely across the ground over the boundary, no matter how far, for they can be placed at once 12 inches within the boundary which will bring 1 in the vicinity of 3 and 4, and having another stroke, he may roquet one or both and continue his play.

PROBLEM 5. 1 has roqueted 2; P is position for 1; bridge 6 is not the proper bridge for 2; 1 cannot be placed under B for a roquet-croquet, and by that roquet-croquet run the bridge (see Rule IV., 4). *Solution:* Roquet-cro-

quet 2 and 1 back through B, bringing 1 into position at P. Then 1 at the next stroke can run the bridge and proceed on its course.

PROBLEM 6.—Conditions same as above except that 2 is in position for bridge 6.

Solution: Place 1 at 1' and roquet croquet according to diagram to 1'' and 2'. This might be done in problem 5 if it was not desirable to place 2 in the position it would assume by driving it

through the bridge, but as the splitting stroke is somewhat more difficult than a straight stroke it is not as sure except to an expert.

PROBLEM 7.—1 is an expert rover; 2 is out of position, 2 to strike. It might at first thought

seem best to roquet 1, then roquet-croquet to position. But we should roquet 1, then croquet 1 against the starting-post and then strike for position. Or, still better, if the relative positions of the balls will admit, roquet 1, then with a splitting roquet-croquet dead 1 and carry 2 to position and continue play. But

the great advantage of deadening a good rover should not be overlooked.

Problem 8.—The difference between a thoughtful and a careless player is seen as much in the

positions in which the two will leave the several balls at the termination of a tour as in any part of the game. For instance, in diagram, 1 is in

position, 2 to play, 3 is the proper bridge for 2, now it would be very unwise for 2 to strike into position near 1 as he would of course be roqueted by 1 at his next tour. Hence supposing there were no other balls in the vicinity, 2 should strike for 2' and thus gain position so far from 1 that he will not care to attempt a roquet. But if 4 should be located as in diagram, 2 should strike for 4—but with such force as to be sure and not overrun 4 very much if he misses it. Then 4 can help 2 at his next turn.

In croquetting a ball, under any circumstances, always bear in mind the order of playing of all the balls on the ground. Thus: in croquetting a friend to a good position, be careful that you do

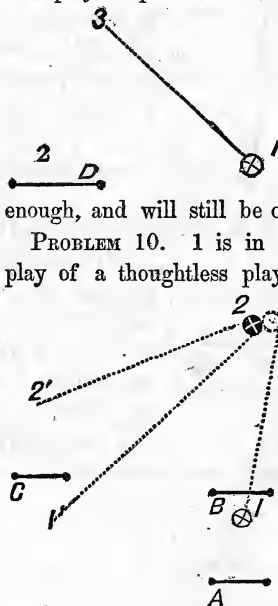

not place him in close proximity to an enemy, unless his play comes before that of the foe. Also, in croqueting an enemy, do not send him near *his* friends, neither near your friends, unless they play first.

PROBLEM 9.—D, is the proper bridge for 1. 1, should play to 3, and

not to 2, because in playing for 2 he must calculate exactly on the distance, otherwise he will go either too far, or not far enough, and will still be out of position.

PROBLEM 10. 1 is in position for B. The play of a thoughtless player would be to run

B, and then strike for position in front of C. But an expert would strike smartly through B, gaining position near 2, then roquet 2 and roquet-croquet to position in front of C. And still better, if

expert enough, he would take a splitting stroke, carrying 1 to 1' and 2 to 2'. Then run C and again roquet 2, &c.

PROBLEM 11. 2 is a rover. 1 is out of position, which is at P. If 1 plays to P, 2 will roquet him at the next turn; but if he can play to 1, the bridge then intervenes, and protects him. The piers of the bridges are excellent fortifications when properly used.

PROBLEM 12. 3 is in possible position for B.

1 is a rover and to play. If he plays to 3, he will drive 3 out of position, but by playing to 1, 3 can roquet him after running B, and then roquet-croquet to position for C, &c.

VOCABULARY.

BOOBY.—See Appendix, K.

BRIDGES OR ARCHES.—The iron hoops or bows through which the balls pass.

BRIDGED BALL.—A ball that has run the first bridge.

CONCUSSION.—The displacement of a ball by another driven against it by roquet, croquet, ricochet, or roquet-croquet, and not hit directly either by the mallet or by the playing ball.

CROQUET.—(Pronounced Cro'-kay.) The title of the game.

THE CROQUET.—Any ball having struck another, is taken up and placed in contact with the ball it has struck. The player sets his foot upon his own ball, pressing firmly so as to hold it in place, and with a blow of his mallet, delivered upon his own ball, drives the other ball in whatever direction he may desire. This operation is faithfully represented in the frontispiece.

DEAD BALL.—One that has made the grand round and hit the starting-post.

DISTANCED.—A ball is distanced when at the termination of the game it has not tolled the turning-post.

DOWN.—The course from the turning-post to the starting-post.

A FLINCH.—When in the croquet, the playing ball is driven from under foot by the blow of the mallet, it is called a flinch.

FRONT OF A BRIDGE.—The side from which the ball must proceed in running it, and with the central bridges is not constant, but is decided in each case by the course of the ball under consideration.

GRAND ROUND.—A ball has made the grand round when it has run all the bridges and tolled the turning-post, and is then a rover.

PLAYING BALL.—The ball struck with the mallet.

POINT.—A player makes a point by running a bridge or tolling a post, or by roqueting a ball that he has not previously roqueted during the

tour since making a step—or in other words, by roqueting a ball under such circumstances as would entitle him to the privilege of the croquet.

POSITION.—A ball is in position when it lies in front of its proper bridges with a possibility of running it by a single blow of the mallet.

PROPER BRIDGE.—A bridge which it is a player's turn to run next in order, is said to be that player's bridge or his proper bridge.

PUSH.—A stroke in which the mallet remains in contact with the ball after the instant of contact.

RICOCHET.—(Rick'-o-shay.) A ball making roquet on two or more balls by the same blow of the mallet.

ROQUET.—(Ro'-kay.) A ball makes roquet on another ball when proceeding from a blow of the mallet, it comes in contact with it, either directly or by rebounding from a fixed obstacle in the ground or from another ball.

Some writers define the roquet as the contact of the playing ball with another ball under such circumstances as to constitute a point. This is merely a matter of choice regarding the facility of defining the other operations of the game. We consider that our definition renders the whole matter much the more simple.

ROQUET-CROQUET.—The same as croquet, except that the playing ball is not held under the foot, but both balls are free to move in accordance with the blow of the mallet.

A ROVER.—A ball that has run all the bridges and has not hit the starting-post.

STARTING-POST.—The stake from which the play proceeds. See Diagram.

A STEP.—Running a bridge, or tolling the turning-post.

STRIKING OUT.—A ball struck against the starting-post after having run all the bridges in their proper order, is struck out and is out of the game.

THE TURNING-POST.—The post opposite the starting-post.

TOLLING THE TURNING-POST.—Striking the turning-post in its proper order.

TOUR, TURN, OR TOUR OF PLAY.—The continued successful playing of any player is called his tour of play, and is terminated by his failure to play with success.

UNDER A BRIDGE.—A ball is under a bridge

when if the mallet handle is placed across the piers of the bridge on each side it will touch the ball in both positions of the handle.

UP.—The course from the starting-post to the turning-post.

APPENDIX.

A.

SEE PAGE 13.

THE Patented Indexical Balls by which the sides are designated as well as the individual players, are a great improvement on the ordinary style of painting the balls. In this arrangement the balls are designated by the several colors as usual,—one-half light colors and one-half dark colors. In addition, all the light balls have a black stripe, and all the dark balls a white stripe. There seems to be a tendency among persons unaccustomed to the game, to prefer a ball of the natural wood color with merely a stripe of paint to designate the players; but such a selection is not wise, because it is of the greatest importance that each ball shall be readily distinguished across the field, and with merely a stripe of color this is oftentimes impossible, especially if the grass is a little too high.

B.

SEE PAGE 15.

One manufacturer has conceived and patented the happy idea of plating the iron bridges with zinc, which gives them a permanent light color, and also protects them from rust.

Some writers assert that withs or firkin hoops answer very well for bridges. They may answer as a very poor substitute; but a good Croquet player would no sooner play with such materials than a billiard player

with a slack rope for a cushion or an umbrella for a cue. In many of the scientific shots of the game the player calculates upon the rigidity of the bridges, and iron bridges when *recently set* in sandy soil are at best none too rigid, while by a little use they soon become very unreliable.

To avoid this and at the same time render the bridges capable of being moved from the ground and replaced readily, the Removable Socket Bridge has been invented. In this arrangement each iron bridge is provided with two wooden sockets, which are driven into the ground in their proper positions, and have holes to receive the bridge. As these sockets may be driven down nearly or quite flush with the ground, it is evident that when the iron bridges are removed, the ground is free to be used for domestic or other purposes, and the bridges by their removal are protected from the weather. The sockets by their large size compared to the size of the bridge give a permanence and rigidity not otherwise attainable.

C.

SEE PAGE 16.

Many devices have been suggested for marking the bridges when run, such as clips or markers, painting the bridge different colors, etc., but none of them have proved popular. The most convenient and practicable device seems to be the Croquet Record Dials. These dials are small, each having a rotary pointer by which each player provided with a dial can keep his or her own position,—as the dial may be attached to the belt or button-hole, it is always at hand.

D.

SEE PAGES 21, 33.

The playing must necessarily be in the order of the colors on the post. But on some grounds the chief is allowed to assign the balls to the several players on his side according to his own choice; thus according to

this rule the chief is not compelled to play the first ball. We do not advise this practice as there is generally some real or fancied difference in the mallets, and hence a chief is liable to offend some one in the distribution of the materials. There are other objections which we have not space to discuss.

E..

SEE PAGE 35.

This rule at first may seem to be arbitrary, but we think on reflection it will be considered in accordance with the best interests of the game. If the ball was taken from the back of the bridge, it would not be in position, having come from the wrong side, as above. Now if it should be allowed that a ball may be taken from the front of the bridge and placed under the bridge without losing position, as would at first seem proper, then the question immediately arises as to a ball when taken from a position directly on a line with the two piers of the bridge, thus coming from neither front nor back. This question can rarely be settled without dispute; to avoid which we have considered the adoption of the above rule as most judicious.

F.

SEE PAGE 38.

One author on Croquet assumes to propound a set of rules on double points, which are entirely new and at variance with all previously established principles of the game, inasmuch as they allow a player to waive any point made or privilege gained. It is an established fact in Croquet that a player may waive any *privilege* that he has acquired; but it is also as well established that a *step* once made can not be taken back. The beauty of Croquet is, in a great degree, due to its simplicity, and the granting of the above right to players adds one-half to the difficulties of the game without adding in the least to its interests. A game of Croquet,

in which all the players except the rover, are denied the privilege of Roquet-Croquet, and in which the right to waive a step is introduced, becomes at once twice as intricate, requires double the rules to explain it, and loses one-half its interest.

G.

SEE PAGE 38.

Instead of the above, the following rule is often given: A Croquet is completed when the mallet makes a perceptible (that is an audible) blow against the croqueting ball, whether that to be croqueted move from its place or not. This rule gives rise to frequent disputes whether the blow was perceptible or not, and is not as generally acceptable as the one we have given.

H.

SEE PAGE 39.

Some authors allow the Roquet-Croquet to the rover only; but as it is one of the most scientific operations of the game, the majority of players are not willing to give it exclusively to the rover, especially when it is considered that a person who is able to become an early rover will naturally have advantage enough without any extra favors. Further, the argument that the universal use of the Roquet-Croquet tends to perceptibly prolong the game has been proved by actual test to be without foundation.

I.

SEE PAGE 39.

This rule is based upon the principle that all questions as to position can only be satisfactorily determined when the ball is not in motion. In the case put it would frequently be impossible to decide whether the ball when it began to roll back was through or not. So also if a ball is driven from the rear through a bridge to position, and then rolls back through the bridge it has not run the bridge—but if it is driven from the rear outside the bridge and then rolls through in course it runs the bridge.

J.

SEE PAGE 39.

By adopting this rule all unpleasant difference of

opinion as to the proper positions of the balls is avoided; and as the origin of the Roquet-Croquet was this very practice of placing the foot lightly upon the playing ball and then allowing both balls to be moved together, there seems to be no objection to the rule.

This rule only applies in a game where the roquet-croquet is allowed to all players.

In case the Roquet-Croquet is only allowed to the rover, the following rule applies: - If the player's ball flinch in executing the Croquet, he forfeits the remainder of his tour, and no point made by a flinching ball is valid, and the balls are considered as accidentally displaced and are replaced in accordance with the rule applying to accidentally displaced balls.

K.

SEE PAGE 32.

BOOBY.—For some reason, never well defined, it has heretofore been customary to make a distinction between the first bridge and any other, by calling a ball missing the first bridge a *Booby*, and allowing it extra privileges or imposing upon it some penalties. Two methods of play have been most common,—the one allowing the booby to be immediately taken from the ground and played from the starting-spot at the next turn; the other, allowing the booby to remain on the ground, but forbidding all use of it by Croquet or Roquet-Croquet. In the first case the booby has an advantage, as by *playing booby* intentionally the first player may lose his turn and thus come in *last* instead of *first*, which is very desirable to a good player. Now suppose that all the players should have the same preferences,—by continually playing booby the game would never commence.

In the second case, the booby has a disadvantage, because if out of position he must take two turns to make the first bridge; while if he could Croquet or Roquet-Croquet other balls, he might make it one.

It has been our object, as far as possible, to render the

game systematic, and hence we always desire to avoid the introduction of arbitrary rules unless they seem necessary. In this case we can not see the least necessity for making any distinction between the first bridge and any other, and the more especially does it seem both unnecessary and undesirable, when the attempts to change the regular order, have, with reference to the privileges of the booby, gone,—the one rule on one side, and the other rule the other side of the *mean* that is obtained simply by letting the whole matter alone. If it is thought necessary to have the *Booby* at all, we should of the two evils much prefer to take it up rather than leave it to be played from the position to which it last rolled—in which case no other additional rules of the game are required to meet the case.

L.

SEE PAGE 32.

No absolute rule can be given for striking a ball. It certainly is the most easy, healthful, and graceful style to hold the mallet in one hand and stand at the side of the ball. But as many persons have not sufficient strength in the wrist to deliver a strong blow accurately with one hand, it is not just to require such methods of play. Also, in the position of the body with reference to the ball, it is impossible to establish any absolute rule; but there is one style of stroke sometimes practiced by gentlemen that is both very awkward in itself and equally ungenerous towards the ladies, who cannot adopt it: We refer to the practice of standing directly behind the ball, and striking by holding the mallet-handle in a perpendicular position and swinging the mallet-head between the feet. We trust that no person who has the least pride will require a rule to prevent the use of this abominable style of play.

INQUIRE FOR THE FOLLOWING

THE GAME OF

CARROMETTE.

The demand long felt for some really good board game to be played with balls and a cue or mallets, which could be manufactured so cheaply as to come within the reach of all, is fully supplied by the new and really fascinating game of Carromette.

It is played on a board one foot wide and three feet long, having pockets at one end and a cushion at the other.

The game is a very pleasing combination of skill and chance, is very portable neatly manufactured in black walnut and green cloth, and sold all furnished for only \$3.50 to \$4.50, according to style of finish. Inquire for it and take one home.

Bradley's Patent Croquet,

ACKNOWLEDGED BY ALL EXPERTS TO BE THE BEST.

The Patented **SOCKET BRIDGES** Double the Value of any Set.

These Improved Sets cost no more than equally good implements without the improvements. The patented Indexical Balls save innumerable blunders and vexatious disputes. No other manufacturers can make or sell Croqueteries with these improvements.

The above cut represents the comparative conditions of the Socket Bridge and the ordinary kind after a little use. Which is best for a scientific shot when you wish a rigid bridge that you can depend on for a carrom?

No set genuine unless the box is made of chestnut and bears the following Trade-mark on top of cover:
